

# README

## HouseHunt - MERN Stack Real Estate System

---

The House Rent Management System is a full-stack web application that allows users to explore rental properties, post listings, and manage rentals through an interactive interface. Built using MongoDB, Express.js, React.js, and Node.js, it integrates secure authentication, responsive design, and admin moderation for a complete web experience.

## Project Status

---

Currently in the “Frontend Integration” phase.

### Features Implemented

- Responsive Landing Page with Hero section.
- Dynamic filtering for 'Buy' and 'Rent' properties.
- Interactive Navigation Bar.
- Grid-based property gallery.

## Programming Language Used-

---

- Frontend: HTML5, CSS3, JavaScript (ES6)
- Backend: Node.js, Express (Coming Soon)
- Database: MongoDB (Coming Soon)
